

Tarea 9 (Ejercicio 1)

Algebra Prof. Arilín Haro

Sebastián González Juárez

Ejercicio 1. (100 puntos)

Sean $z, w \in \mathbb{C}$, demuestra la identidad del paralelogramo:

$$|z + w|^2 + |z - w|^2 = 2(|z|^2 + |w|^2)$$

Dem.

Sea $a, b, c, d \in \mathbb{R}$: $z = a + bi$ y $w = c + di$

$$\begin{aligned} & |z + w|^2 + |z - w|^2 \\ \Leftrightarrow & |(a + bi) + (c + di)|^2 + |(a + bi) - (c + di)|^2 \\ \Leftrightarrow & |a + bi + c + di|^2 + |a + bi - c - di|^2 \\ \Leftrightarrow & |(a + c) + (bi + di)|^2 + |(a - c) + (bi - di)|^2 \end{aligned}$$

Veamos que:

$$|(a + c) + (bi + di)| = \sqrt{(a + c)^2 + (b + d)^2} \quad \text{y} \quad |(a - c) + (bi - di)| = \sqrt{(a - c)^2 + (b - d)^2}$$

Entonces tenemos que:

$$\begin{aligned} \Leftrightarrow & \left(\sqrt{(a + c)^2 + (b + d)^2} \right)^2 + \left(\sqrt{(a - c)^2 + (b - d)^2} \right)^2 \\ \Leftrightarrow & (a + c)^2 + (b + d)^2 + (a - c)^2 + (b - d)^2 \\ \Leftrightarrow & a^2 + 2ac + c^2 + b^2 + 2bd + d^2 + a^2 - 2ac + c^2 + b^2 - 2bd + d^2 \\ \Leftrightarrow & 2a^2 + 2b^2 + 2c^2 + 2d^2 \\ \Leftrightarrow & 2(a^2 + b^2 + c^2 + d^2) \\ \Leftrightarrow & 2 \left(\left(\sqrt{a^2 + b^2} \right)^2 + \left(\sqrt{c^2 + d^2} \right)^2 \right) \end{aligned}$$

Recordemos que:

$$|z| = \sqrt{a^2 + b^2} \quad \text{y} \quad |w| = \sqrt{c^2 + d^2}$$

Por lo tanto:

$$\Leftrightarrow 2(|z|^2 + |w|^2)$$

■
